

# SIMS IMPORT SYSTEM

Normal SIMS Image

As an additional service PSP can now enlarge the students images so that you can see the image of your pupils more clearly when viewing them on your database.

This is only available when using the SIMS Manual Import System.

Enlarged PSP SIMS Image

## Do you use **SIMS** for your school database?

If the answer is 'YES' then we can make your day easier!

How long does it take to update your school records management system?

Using PSP's **ID-LINK** software we can help you to add names to faces quickly and with very little administration by your staff.

With our **ID-LINK** system it is possible to use either the **Manual Import System** or, the automatic **Batch Importing Service!**

**Auto Batch Importing** can save your staff hours of work and can import 1000's of students images in minutes!

To use the **ID-LINK** system we need an EXCEL file containing your student's information at least 7 days prior to the shoot so we can produce the barcode cards. We also require your DfES LEA number and your school number.

PSP is a licensed photographer with CAPITA who supply SIMS software and systems to over 22,000 schools across the country.

All of our software and systems are CAPITA approved. Contact our offices for more information about SIMS.
